create a table in sql server for bank user with following fields userid,name,account title,account type,balance,

Here is an example SQL script to create a table for bank users with the specified fields:

sql

Copy code

```
CREATE TABLE BankUsers (  
    UserID INT PRIMARY KEY,  
    Name VARCHAR(50),  
    AccountTitle VARCHAR(50),  
    AccountType VARCHAR(50),  
    Balance DECIMAL(10, 2)  
);
```

This will create a table called "BankUsers" with the following fields:

- UserID (an integer field that serves as the primary key)
- Name (a text field for the user's name)
- AccountTitle (a text field for the title of the user's account)
- AccountType (a text field for the type of the user's account)
- Balance (a decimal field for the current balance in the user's account, with a precision of 10 digits and a scale of 2)

create a store procedure of insert update and delete
